Just when demographers are ringing alarm about overpopulation, Amazon founder Jeff Bezos says we need to populate our solar system. Mr Bezos was asked for his thoughts on humanity living in autospace in a thousand years time. He replied: "I would love to see, you know, a trillion humans living in the Solar system. If we had a trillion humans, we would have at any given time 1000 Mozarts and 1000 Einsteins. Space would be full of life and intelligence and energy." He added that he wants to help build heavy infrastructure that will be used by the space entrepreneurs of future generations... so that ingenuity and imagination can really be unleashed.

Mr Bezos' thoughts are argued by fellow ~~multi-millioner~~ multi-billioner Elon Musk, owner of X (formerly known as Twitter). In 2021, he said of the human race: "We don't want to be one of those 'single-planet' species; we want to be a 'multi-planet' species." Earlier this year, Mr Musk warned that: "Population collapse due to low birth rates is a much bigger risk to civilisation than global warming... mark these words." Mr Bezos conceives of people living in giant space stations. He said most inhabitants of these would visit Earth for vacations. He envisions our planet returning to its pristine environment, as factories would be built in space. He said that they would exploit resources on the moon or on asteroids instead of using up Earth.
