Just when demographers are ringing alarm bells about overpopulation, Amazon founder Jeff Bezos says "We need to populate our solar system". Mister Bezos was asked for his thoughts on humanity living in outer space in a thousand years time. He replied: "I would love to see, you know, a trillion humans living in the solar system. If we have had a trillion humans, we would have at any given time 1000 Mozarts and 1000 Einsteins... space would be full of life and intelligence and energy". He added that he wants to help "build heavy infrastructure that will be used by the space entrepreneurs of future generations... so that ingenuity and imagination can really be unleashed".

Mister Bezos's thoughts are echoed by fellow multi-billionaire Elon Musk, owner of EX (formally known as Twitter). In 2021, he said of the human race "We don't want to be one of those single-planet species; we want to be a multi-planet species". Earlier this year, mister Musk warned that "population collapse due to low birth rates is a much bigger risk to civilization than global warming... mark these words." Mister Bezos conceives of people living in giant space stations. He said most inhabitants of these would visit Earth for vacations. He envisions

our planet returning to its pristine environment, as factories would be built in space. He said they would exploit resources on the Moon or on asteroids instead of using up Earth's.
