Just when demographers are ringing alarm bells about overpopulation, Amazon founder Jeff Bezos says we need to populate our solar system. Mister Bezos was asked for his thoughts on humanity living in outer space in a thousand years time. He replied: "I would love to see, you know, a trillion humans living in the solar system. If we had a trillion humans, we would have at any given time 1000 Mozarts and 1000 Einsteins. Space would be full of life and intelligence and energy." He added that he wants to help "build heavy infrastructure that will be used by the space entrepreneurs of future generations..."

so that ingenuity and imagination
can really be unleashed.

Mister Bezos' thoughts are echoed
by fellow multi-billioner Elon Musk,
owner of X (formerly known as
Twitter). In 2021, he said of
the human race: "We don't ~~know~~
want to be one of those single-planet
species; we want to be a multi-planet
species". Earlier this year, mister Musk
warned that: "Population collapse due to
low birth rights is a much bigger
risk to civilization than global warming."
mark these words. Mister Bezos
conceives of people living in giant space
stations. He said most inhabitants

of these would visit Earth for vacations. He in visions our planet returning to the pristine environment, as factories would be built in space. He said they would exploit resources on the moon or on asteroids instead of using up Earth's.
