~~Just when demographers a ringing alarm bells about overpopulation~~

Just when demographers are ringing alarm bells about overpopulation, Amazon founder Jeff Bezos says we need to populate our solar system. Mister Bezos was asked for his thoughts on humanity living in outer space in a thousand years time. He replied: "I would love to see, you know, a trillion humans living in the solar system. If we had a trillion humans, we would have at any given time 1,000 Mozarts and 1,000 Einsteins... Space would be full of life and intelligence and energy. He added that he wants to help "build heavy infrastructure that will be used by the space intergenerations of future generations... So that it's maintained

imagination can really be useful."

Mister Bezos thought's were echoed by fellow multi-billion multi-billioner Elon Musk, owner of X (formerly known as Twitter). In 2021, he said of the human race: "We don't want to be one of those single-planet species; we want to build a multi-planet species." Earlier this year, ^{he said} Musk warned that: "Population collapse due to low birth rates is a much bigger risk to civilization than global warming. Mark these words". Mister Bezos envisions of people living giant space stations. He said most of the inhabitants of this world visit ^{Earth} for vacations. He envisions our planet returning to its pristine environment, as factories would be built in space. He said they would exploit resources on the moon ^{or on} asteroids instead of using up Earth's.
