Task 3

Just when demographers are ringing alarm bells about population, Amazon founder Jeff Bezos says we need to populate our Solar system. Mister Bezos was asked for his thoughts on humanity living in outer space in a thousand years time. He replied: "I would love to see, just now, a trillion humans living in the Solar system. If we would have at any given time 1,000 and 1,000 Einsteins... space would be full of life and intelligence and energy". He added that he ~~the space entrepreneurs~~ wants to help build heavy infrastructure that will be used by the space entrepreneurs of future generations... so that... imagination can really be unleashed.

Mister Bezos thoughts are echoed by fellow multi-billionaire Elon Musk, owner of X (formerly known as Twitter). In 2021, he said of the human race: "We don't want to be one of those

single-planet species; we want to be a multi-planet species." Earlier this year Mister Musk warned that "population collapse due to low birth rates is a much bigger risk to civilization than global warming... mark these words." Mister Bezos conceives of people living in giant space stations. He said most inhabitants of these would visit Earth for vacations. He envisions our planet returning to its pristine environment, as factories would be built in space. He said they would exploit resources on the Moon or on asteroids instead of using up Earth's.
