Task 3

Just when demographers are ringing alarm bells about overpopulation, Amazon founder Jeff Bezos says we need to populate our <sup>solar</sup> ~~solar~~ system. Mr Bezos was asked for his thoughts on humanity living in outer space in a thousand years time. He replies: "I would love to see, you know, a trillion humans living in the solar system. If we had a trillion humans we would have at any given time 1000 Mozarts and 1000 Einsteins... Space would be full of life and intelligence and ~~energy~~." He added that he wants to help "build" heavy infrastructure that will be used by the space entrepreneurs of future generations, so that ingenue's imagination can really be unleashed.

Mr Bezos' thoughts are echoed by fellow multi-billioner Elon Musk, owner of X (formerly known as Twitter). In 2021 he said of the human race: "we don't want to be one of those single-planet species; we want to be a multi-planet species." Earlier this year, Mr Musk warned that:

"population collapse due to low birth rates is a much bigger risk to civilization than global warming... Mark these words." Mr. Bezos can conceive of people living in giant space stations. He said most inhabitants of these would visit Earth for vacations. He envisions our planet returning to its pristine environment, as factories would be built in space. He said they would exploit resources on the Moon or on asteroids instead of using up Earth's.
